The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 18 and 25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 18, on lines 2-3, "the image edge" lacks a proper antecedent basis. In addition, it apparently should be "the image on the edge portion of the detector". Similar recitation in claim 25 similarly lacks a proper antecedent basis. Clarification and correction are required.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 16-20 and 23-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Hinnrichs et al 5,479,258.

Hinnrichs et al disclose an optical system comprising a radiation detector (32); and at least one radiation image splitter (31B) for simultaneously splitting/dividing an input radiation image into at least two partial images (30a-30d) and projecting the images onto the detector, wherein the radiation intensity patterns ( $\lambda_1$ -  $\lambda_4$ ) of the images being reflectively projected at locations displaced from an image center of the radiation image to edges of the radiation image on the detector. At least, Figure 3B, Hinnrichs et al disclose a square input radiation image signal being splitted into four partial images.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 21, 22 and 28-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hinnrichs et al 5,479,258.

With respect to claims 21, 22 and 28-30, although Hinnrichs et al lack an inclusion of a radiation detector for detection of radiation images of celestial bodies and/or whether or not the detector is a combined earth-star sensor, it would have been inherently included by the inclusion, at least in column 2, of "from remote targets within a field of view", however, if not, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify Hinnrichs et al accordingly in order to provide

wider application capability of the system without altering the basic performance of the system.
